Baarn, Netherlands · Available for fractional engagements · €600–€1,200/day

PROFESSIONAL SUMMARY

Fractional CTO and technical leader with 15+ years of owning all technical decisions across five concurrent organizations: architecture, stack selection, team building, regulatory compliance, engineering culture. Never held the formal CTO title because the engagements never required it. Was always the person who made the calls.

Available for 1–2 day/week fractional engagements with Amsterdam-area startups and scale-ups. Day rate: €600–€1,200. Fully remote-capable, async-first, CET-based.

Built: MICA-compliant digital identity infrastructure (W3C-recognized), AI-powered supply chain compliance tooling, blockchain ecosystems, self-hosted AI research stacks from scratch. Took four ventures from concept to operating business, including one student project that became a €2M-funded agri-tech startup. Delivered technical due diligence that led to a 4x investor exit. Solo field deployments across Jordan, Oman, Azerbaijan, and Houston with no remote support and no margin for error.

CORE COMPETENCIES

Fractional CTO Leadership

Engineering Roadmap Design

Technical Architecture & Stack Selection

Startup Team Building & Mentorship

AI Infrastructure Deployment

Open Source Governance

Vendor & Partner Management

Regulatory Compliance (MICA, EUDR, CSRD)

WORK EXPERIENCE

Tonomy Foundation 2021 – Present

Co-Founder & Technical Lead (Acting CTO) · Amsterdam & Remote

- Acting CTO from day one:** Owned all technical architecture decisions. Chose the stack, defined the engineering roadmap, selected compliance standards (MICA), structured partner integrations, and drove all technical narrative in investor and community contexts.
- Product build:** Designed and co-built Pangea Vault, Tonomy's identity vault product, focused on user-owned digital identity with strong privacy guarantees aligned to W3C DID standards. Organization reached W3C-recognized status.
- Ecosystem design:** Co-wrote the technical whitepaper and mapped stakeholder ecosystems to position Tonomy within the emerging regulatory and decentralized identity landscape.
- Engineering culture:** Ran 2-week agile sprint cycles across a distributed team. Structured the organization for independent scaling; transitioned to board role once the operating model was established.

Viridis Green-Tech AG 2024 – Present

Innovation Architect (Fractional Tech Lead) · Munich, Germany (Remote from NL)

- Technical ownership:** Own all architecture decisions for the Viridis innovation lab. Define what gets built, how systems connect, and what the technical roadmap looks like across blockchain, traceability, and sustainability tooling.
- Ecosystem architecture:** Designed a modular, blockchain-powered system supporting supply chain traceability, ethics, and verifiability for European market compliance.
- Resource strategy:** Co-authored grant proposals for open infrastructure and compliance tooling tracks; aligned lab priorities with commercial sustainability goals.

Windesheim University of Applied Sciences

Jan 2020 – Present

Project Manager & AI Infrastructure Lead · Zwolle, Netherlands (1 day/week)

- **AI stack architecture:** Designed and deployed a self-funded, self-hosted AI research environment from scratch. Stack: Flowise, OpenWebUI, n8n, Supabase on Docker and Linux, with full CI/CD, database management, and monitoring. Solo build, no external support.
- **Lab founding:** Built Spark! Living Lab (blockchain simulation) and Value Chain Hackers (AI-powered supply chain compliance tooling). Both in active use. valuechainhackers.xyz
- **Team development:** Recruited and mentored student interns who became co-developers on open-source lab tools. Several went on to found or join startups.
- **DevOps ownership:** Maintained full DevOps lifecycle (provisioning, containerization, CI/CD, monitoring, incident response) across all lab environments since 2020.

COTIT

Jan 2024 – Jul 2024

Business Innovator · Almere, Netherlands

- Brought technical and operational clarity to a modular logistics startup in early scale-up phase. Defined the SaaS product architecture, restructured internal processes using agile methods, and organized financial structure for the next funding round.

Social Chicken (freelance)

2016 – 2022

Senior Technical Consultant & Project Lead · Amsterdam, Netherlands

- **Technical due diligence:** Full code and architecture review of a pre-seed startup for an investor. Positive recommendation. 4x exit.
- **Blockchain consultancy (Inblock.io):** Delivered blockchain training and proof-of-concept development for early enterprise clients in Berlin and Amsterdam.
- **Infrastructure delivery:** Managed private cloud setups, database migrations, BI dashboards, and automation systems for local SMEs. Full DevOps stack: Linux, Nagios monitoring, CI/CD pipelines.

Open Food Chain

2022 – 2024

Community Manager · Amsterdam / Remote

- Wrote smart contracts, ran agile sprints for software development, built and moderated a growing technical and stakeholder community. Simplified technical documentation to onboard new investors. Supported outreach that led to new investment rounds.

Aeres Hogeschool

2021 – 2022

Lab Manager · Dronten, Netherlands

- Recognized a student project (Veles Farming) as high-potential, moved it to the lab for prototyping, became advisor and seed investor, guided the founder through key technical and business decisions. Now an operating agri-tech startup in Slovakia with €2M in funding. velesfarming.com
- Supported Magic Frames from concept through to independent launch as a creative tech platform. mgframes.nl

KONGSBERG

2012 – 2013

Field Service Engineer & Thesis Researcher · Kristiansand, Norway

- Solo deployment engineer across Jordan, Oman, Houston, and Azerbaijan. The only person on the team able to execute every part of a deployment end to end: software, hardware, data negotiation, and procedure compliance under pressure, with no internet access and no remote support.
- **Azerbaijan:** Subcontractor withheld BP-contracted data. Read the BP contract, cited specific clauses to the division manager, held the position. Data shared within one day.
- **Jordan:** Database failed despite correct procedure. Deployed a dead-switch to isolate a client-side networking fault. Resolved on day three, on schedule.

SELECTED PROJECTS

Technical Due Diligence: 4x Investor Exit

Investment outcome

Conducted a full code and architecture review of a pre-seed startup codebase. Assessed technical debt, architecture quality, team capability, and scalability risks. Delivered a written investment recommendation. The investor proceeded. 4x exit.

Veles Farming: Student Concept to €2M Agri-Tech Startup Startup incubation

Identified a student project with commercial potential during coursework at Inholland. Moved it to Aeres for prototyping, became advisor and seed investor, guided the founder through key technical and business decisions. Now an operating agri-tech startup in Slovakia with €2M in funding. velesfarming.com

Value Chain Hackers: AI Supply Chain Compliance Platform 2024–present

Cross-European initiative building AI-powered traceability and compliance tools for CSRD, CSDDD, and EUDR. Full open-source infrastructure, Docker-based, self-funded. Principal investigator for Windesheim's Supply Chain Finance lecture. valuechainhackers.xyz

Tonomy Foundation: MICA-Compliant Digital Identity Infrastructure W3C-recognized

Co-founded and served as acting CTO. Designed the technical architecture for Pangea Vault, a user-owned digital identity system aligned to W3C DID standards and MICA compliance. Built the engineering roadmap, selected the stack, co-wrote the technical whitepaper, and structured partner integrations across a distributed team. tonomy.foundation

EDUCATION & CERTIFICATIONS

Bachelor of Business Administration, Business IT & Management Hogeschool van Amsterdam Grade: 8.7 · Thesis: simulation-based training methodology at KONGSBERG · Minor: E-Discovery & Digital Forensics (ESIEA Paris)	2010–2014
Teacher Training, Mathematics Hogeschool Inholland	2007–2008
Scrum Master · Professional Scrum Product Owner I (PSPO I)	Scrum.org
Prince2 · ITIL	APMG / Axelos
Oracle SOA 11g Essentials · Service Oriented Architecture Concepts	Oracle
ESG & Sustainable Supply Chains · Data Analysis & Visualization (R, Python)	
Offshore Survival Training / HUET	KONGSBERG 2012

TECHNICAL SKILLS

CTO / Architecture: stack selection, engineering roadmap, technical due diligence, open-source governance, regulatory mapping (MICA, EUDR, CSRD)

AI & Infrastructure: Flowise, OpenWebUI, n8n, Supabase, Docker, Kubernetes, Linux (CentOS / Ubuntu / Debian), GitHub CI/CD, Nagios, Grafana

Blockchain & Identity: SSI, W3C DID, MICA, Ethereum, smart contracts, HyperLedger, EOSIO, Oracle SOA 11g/12c

Databases: MySQL, PostgreSQL, Microsoft SQL Server, Oracle

Agile & Delivery: Scrum, SafeScrum, Kanban, async-first distributed teams, sprint planning

Languages: Dutch (native), English (near-native), German (conversational)
