GitLab

AI Transformation Owner, Marketing

2 June 2026

Dear GitLab team,

At Aeres, I merged eight separate courses into one program running on a shared sprint rhythm in under two months. Faculty who had resisted change for years ran their first sprint review on week four. The unlock was not a training session. It was designing an experience where the gap between current reality and the new method became visible, felt rather than argued. That is the Conscious Competence model. It works the same way whether the domain is agile education, blockchain adoption, or AI transformation.

I have been running n8n in production for two years at Windesheim: supply chain compliance workflows, AI research onboarding, agent routing for student and researcher experimentation. The system handles real users with zero IT support behind it. Alongside that, I built and maintained the Open Food Chain champion network on Discord: recruitment, channel design, ritual cadence, moderation structure. It grew to 200+ active members and supported a new investment round. Those are the two components GitLab describes for this role: hands-on no-code agent building and champion network ownership.

GitLab's separation of the AI Engineer role from the Transformation Owner role is the right architecture. Adoption does not fail because the tool is bad. It fails because no one designed the experience of trust. That is the gap I fill. The Marketing domain is one I would learn fast. The transformation methodology is the rare part.

One thing worth naming: my base is Baarn, Netherlands. The eligible locations listed are Canada, Ireland, UK, and US. I would want to confirm whether the NL location is workable for the right candidate.

Kind regards,

Christiaan Verhoef
