

Evaluation: EDSN - Scrum Master (medior)

Date: 2026-05-21

URL: <https://werkenbij.edsn.nl/vacatures/scrum-master-medior/>

Archetype: Traditional Scrum Master / SAFe (not in primary archetypes)

Score: 3.4/5

Culture Fit: Conditional

Legitimacy: High Confidence

PDF: ❌

Verification: unconfirmed (WebFetch fallback)

CV Language: Dutch (NL company)

A) ROLE SUMMARY

Field	Value
Archetype	Traditional Scrum Master (SAFe environment)
Domain	Energy data infrastructure (Dutch energy market)
Function	Facilitate, coach, implement SAFe
Seniority	Medior
Remote	Hybrid - Amersfoort
Team size	Multiple teams in SAFe/ART structure
TL;DR	Medior Scrum Master implementing SAFe in Dutch energy data infrastructure organization, PSM II required, 5 years DevOps required

B) MATCH WITH CV

JD Requirement	CV Evidence	Strength
HBO/WO degree	BBA Business IT & Management	✅ Strong
3+ years as Scrum Master	Embedded agile facilitation across 5+ labs and university programs since 2020	✅ Moderate - embedded, not titled
5+ years DevOps experience	10+ years: Docker, Kubernetes, CI/CD, Linux, Nagios, Grafana, self-hosted stacks, Windesheim labs, Social Chicken cloud work, Meerschap monitoring	✅ Strong - was missing from CV, now surfaced
PSM II certification (PSM III preferred)	Has PSM I / Scrum Master cert; deep practical knowledge, capable of passing PSM II	⚠️ Gap - cert not yet obtained, but achievable
SAFe implementation in large org	SafeScrum (Aeres 8-course integration) is adjacent; knows SAFe framework	⚠️ Moderate - different framework but transferable
Dutch fluency	Native	✅ Strong
Energy sector experience	None	⚠️ Weak - mitigatable, SM is process-agnostic

Remaining gaps:

- PSM II cert** - Not yet obtained. If serious about this role, get PSM II first (online exam, ~1 week prep given existing knowledge). ±€250. Action: *book exam before applying*.
- SAFe vs SafeScrum** - Different frameworks. Study SAFe basics (1-2 days) and be transparent about it. Energy sector org likely values practical experience over cert brand.

3. **Medior level** - Christiaan is over-qualified. Risk of being screened out. *Mitigation: apply anyway; if called, salary negotiation should push toward upper band.*

C) LEVEL AND STRATEGY

Level: Medior - significantly below Christiaan's experience level.

Verdict: Do not apply. Three hard requirement gaps + under-leveled + wrong archetype + no AI component. This role is a mismatch on multiple dimensions.

D) COMP AND DEMAND

Data point	Value	Source
JD salary	€50,000-€77,000/year	JD
Christiaan's target	€65,000-€90,000	profile.yml
Assessment	Upper end in range, but role is under-leveled and mismatched	-

G) POSTING LEGITIMACY

Assessment: High Confidence

Signal	Finding	Weight
Posting date	May 21, 2026 - today	✓ Very fresh
Contact	Named contact (Ash Kogelman) with phone	✓ Strong
Salary transparency	€50k-€77k clearly stated	✓ Strong
Company	EDSN is real energy data infrastructure org for NL market	✓ Strong

Role is real and active. Posted today.

RECOMMENDATION

Score 3.4/5 - apply after getting PSM II cert. Re-scored upward after confirming 10+ years DevOps and 15+ years agile depth.

DevOps blocker removed (10+ years confirmed across Windesheim, Social Chicken, Meerschap, KONGSBERG). SAFE learnable in 1-2 days. Only real gap: PSM II cert - book the exam (±€250, ~1 week prep given existing depth). Medior level risks over-qualification screen but salary upper end (€77k) is in range. Stable energy sector, hybrid Amersfoort.

H) CULTURE, PERSONALITY & LONG-TERM FIT

H1 - Org Culture Assessment

Stage and type: Established Dutch public-utility-adjacent organization. EDSN (Energie Data Services Nederland) manages critical energy data infrastructure for the Dutch energy market - a semi-public, regulated context. The culture is process-driven, governance-focused, and stability-oriented. It is building SAFE structures, which signals a large-program, compliance-first organizational mindset.

Culture signals: The JD language emphasizes SAFE implementation, servant leadership, and ART facilitation. The requirement for PSM II/III before applying signals that credentials matter - this is a credential-valuing culture. The named contact and transparent salary are positive procedural signals, but the SAFE context implies heavy ceremony and framework compliance rather than innovation.

Physical/work environment: Hybrid at Amersfoort. Amersfoort is 15 minutes from Baarn - the best commute in this batch. The physical setting is a corporate/utility office.

Match against 2-year vision: The 2-year vision is a hackerspace: small group, building new things, high trust, new territory. EDSN scores poorly on almost every dimension of this vision. SAFE is arguably the most ceremony-heavy

agile framework in existence - the opposite of a hackerspace. The energy data infrastructure domain is stable and regulated. The "new territory" dimension is absent. Alignment is very low.

H2 - Personality Fit Table

Dimension	What the role requires	Christiaan's profile	Match
Starter vs. finisher	SAFe implementation and ongoing ART facilitation - primarily finisher and maintainer	ENFP-T starter, strongest 0 to 1 and 1 to 2	Poor
Variety vs. repetition	SAFe ceremonies are highly repetitive (PI planning, sprint reviews, retrospectives at ART scale)	Thrives on variety, drains fast on repetition	Poor
Autonomy level	Execution within a defined SAFe framework - limited design authority	Needs ownership, not execution-only	Poor
Build vs. maintain	Maintain SAFe ART cadence and team health	Builder identity - maintenance depletes energy	Poor
Fractional fit	Full-time medior role	Optimal: 2 to 3 concurrent 0.4 to 0.6 FTE	Fractional conflict
Energy spike tolerance	Regulated utility culture - front-loaded energy would be disruptive in a governance-first environment	Front-loaded high energy in first weeks	Risk
Team size	Multiple SAFe ART teams - medium-large org	Small team, high trust preference	Poor

Flags: Ceremony-heavy SAFe context. No building mandate. Full-time exclusivity. Large program, slow decision cycles.

H3 - Values and Mission Alignment

EDSN manages the digital infrastructure that makes the Dutch energy market function - a critical public good. The mission has genuine societal significance but is deeply behind-the-scenes infrastructure work. Christiaan would not seek this role for the mission, and the work does not connect to his frontier interests (AI adoption, learning innovation, sustainability demonstration, community building). Energy data infrastructure is important but it is the opposite of frontier.

This is a purely transactional motivation: stable income, proximity to Baarn, energy sector entry point. There is no intrinsic pull.

H4 - Energy Analysis

Energizers for this role:

- Very short commute from Baarn (15 minutes)
- PSM II certification is a forcing function - certification as a learning event briefly energizes
- Stable, predictable income

Likely drains:

- SAFe is the highest-ceremony agile framework - sprint ceremonies at ART scale are extremely repetitive
- No AI component, no innovation mandate, no building
- Regulated utility culture: slow, consensus-first, governance-heavy
- Medior level - significantly under-leveled for Christiaan's actual experience
- Full-time exclusivity blocks multi-engagement model
- The PSM II prerequisite makes this an "apply after certification" role - no immediate engagement available

H5 - 18-Month Durability Test

Rating: Short-term fit only - high plateau risk from day one.

The SAFe context means the role is maintenance-oriented from the beginning. There is no initial build phase - Christiaan would be entering an existing ART structure and running its ceremonies. The 18-month picture is clear: increasing ceremony fatigue, frustration with slow decision cycles, and growing sense of being under-utilized. This is not a role that gets better over time for someone with Christiaan's profile.

H6 - Personality-Specific Red Flags

Red flag	Present?	Severity	Context
Role is primarily maintenance/ops	Yes	High	SAFe ART facilitation is ongoing ceremony management
Solo sales of an unready product	No	n/a	Not a sales role
Full-time exclusivity expected	Yes	Medium	Full-time medior role
Large corporate, slow decision cycles	Yes	High	Public utility with SAFe governance - maximum ceremony, minimum speed
Governance/board role in declining org	No	n/a	Stable organization
Ceremony-only Scrum Master	Yes	High	SAFe Scrum Master in an established ART is ceremony-heavy with minimal coaching mandate

Multiple red flags present simultaneously.

H7 - Fit Verdict

The honest case for this match:

Baarn-to-Amersfoort commute is the shortest in this batch. Salary upper end (€77k) is within range. The PSM II certification, while a prerequisite, would strengthen credentials across all applications. EDSN is stable - no layoff risk, no startup uncertainty. For a short-term income anchor while building other engagements, and if the certification is obtained, this is administratively attractive.

The honest case against:

SAFe is the worst-fit framework for Christiaan's personality - maximum ceremony, minimum autonomy, minimum building. The culture is the opposite of a hackerspace in every meaningful dimension. The role is under-leveled. The energy domain is not a frontier. Multiple personality-specific red flags are present simultaneously. The honest read: this role would drain Christiaan within 6 months regardless of how well he performs. The score of 3.4 reflects the DevOps and agile skill match, but the personality/culture fit would push the effective score below 3.0 if weighted equally.

Overall personality/culture fit: Conditional (condition: role is explicitly a transitional income anchor for 6 to 12 months while pursuing PSM II certification and higher-fit opportunities in parallel; do not apply as a primary career move)

Note: The instruction to "get PSM II first" in the main recommendation is correct. Add to it: apply only if other options with stronger culture fit are not available at the time of certification.
