Legitimacy: Proceed with Caution
Verification: confirmed (WebFetch)
Date: 2026-05-21

A) ROLE SUMMARY

Field	Detail
Archetype	AI Forward Deployed / AI Transformation (hybrid)
Domain	Enterprise AI deployment, solutions consulting
Function	Deploy, consult, sell
Seniority	Mid (2+ years required)
Remote	On-site, Amsterdam
Team size	Solutions team (size not specified)
TL;DR	Client-facing strategist who runs workshops, designs AI deployment roadmaps, and travels 30-60% to drive enterprise adoption of Mistral's models - with a hard Python/technical coding requirement baked in.

B) MATCH WITH CV

JD Requirement	CV Evidence	Fit
Facilitate executive workshops identifying AI opportunities	"Workshop Design & Facilitation (Expert): co-creation, participatory design, simulation, game-based learning" + ran workshops at Aeres, Windesheim, The Fork	Strong
Build AI adoption roadmaps / strategies	AI Transformation Lead archetype; Aeres school-wide Scrum rollout, Value Chain Hackers lab	Strong
Partner with sales on ROI / business case development	Business Development (Advanced): "partner development, ecosystem building, investor outreach, grant acquisition, pitch and narrative design; contributed to €2M in funding raised"	Moderate
Design end-to-end AI systems integrating Mistral technology	Self-hosted AI stack (Flowise, OpenWebUI, n8n, Supabase); Docker/Kubernetes; 10+ years DevOps	Partial - design yes, but Mistral-specific deployment experience is absent
Lead pilot / proof-of-concept projects	Beer game demonstrator, KnopenKoning, Interactive due diligence (4x exit), COVID-19 mega project	Strong
Strategic advisor for client value realization	Business Process Design (Expert), Stakeholder Alignment (Expert), Windesheim/Aeres cross-stakeholder work	Strong
Track business-focused KPIs, report to sponsors	Project & Program Management (Expert): "reporting to stakeholders - applied across university programs, innovation labs"	Strong
Hands-on Python building and deploying AI	Data Analysis & Visualization (R, Python) certification; Flowise/n8n stack deployment - but Python dev is not a	Weak - Python is listed as a cert, not as a regular

applications	primary skill	delivery tool
MEDDPICC / value-based selling experience	No direct MEDDPICC experience; consultative sales through COTIT and Tonomy	Weak
Travel 30-60% for client engagement	Baarn-based, NL travel feasible; international travel 30-60% is a commitment question	Neutral
2+ years client-facing technical/strategic roles	KONGSBERG BI deployments (BP Jordan, BP Oman, Statoil), COTIT, The Fork - 10+ years	Strong
Degree in relevant scientific discipline	Bachelor Business IT & Management, HvA, grade 8.7	Strong

Gaps

Gap	Blocker?	Mitigation
Hands-on Python AI development (the JD specifically says "building AI apps using Python")	Hard for this role - the LLM technical evaluation is 60 minutes	Could lean on n8n/Flowise as orchestration layer evidence; but a dedicated 60-min LLM technical screen is likely to expose this
MEDDPICC sales methodology	Nice-to-have (marked "preferred")	Frame COTIT SaaS sales cycle definition and ecosystem partner outreach as structured selling experience
Mistral model-specific deployment knowledge	Nice-to-have but relevant	Self-study on Mistral APIs before interview; demonstrate ability to ramp fast
30-60% travel commitment	Lifestyle consideration	Baarn to Amsterdam is same-day; international travel would conflict with multi-position strategy

C) LEVEL AND STRATEGY

Level detected: Mid-level (2+ years minimum) - the role is positioned as an individual contributor solutions consultant, not a senior director.

Christiaan's natural level for this archetype: He is operating above this level in facilitation, lab-building, and transformation strategy. He is below this level in Python-driven AI deployment.

Sell senior without lying:

- Open with Windesheim AI sandbox (self-hosted Flowise, OpenWebUI, n8n, Supabase) as evidence of hands-on AI infrastructure work - this is the closest equivalent to "deploying AI applications."
- Lead with executive workshop facilitation as a demonstrated skill (not aspiration): Aeres school-wide rollout, Spark! Living Lab workshops, 2bSMART cross-Benelux training.
- Position KONGSBERG client deployments (BP Jordan, BP Oman, Statoil) as the lineage for client-facing technical delivery.

If downlevelled: Not applicable - this is already a mid-level IC role. If pushed to junior title, decline.

D) COMP AND DEMAND

Metric	Data	Source
Mistral Amsterdam salary range (not disclosed)	No salary listed in JD - benefits package suggests mid-market (€60/mo transport, €170/mo food, €60/mo gym)	JD
AI Solutions/Deployment consultant NL market	€55,000 - €85,000 for mid-level; €85,000 - €120,000 for senior	Glassdoor NL AI consultant ranges 2025
Christiaan's target	€65,000 - €90,000	_profile.md
Demand trend	High - AI deployment roles growing strongly in EU market; Mistral is raising capital and expanding go-to-market	Market context

Assessment: Comp is plausible at target range but not confirmed. Mistral's EU expansion is real and the Amsterdam office is active. The 30-60% travel expectation is an implicit cost on work-life.

E) CUSTOMIZATION PLAN

#	Section	Current Status	Proposed Change	Why
1	Summary	Generic bridge-builder framing	Open with: "Designed and deployed AI learning environments and infrastructure at university scale - now applying that model to enterprise clients."	Directly mirrors the JD's "strategic vision to production implementation" framing
2	AI Stack bullet	Listed under Windesheim	Elevate to standalone highlight: "Self-hosted AI research stack (Flowise, OpenWebUI, n8n, Supabase) - Docker-based, maintained for student and researcher experimentation at Windesheim"	The LLM technical screen needs evidence of hands-on AI infrastructure
3	Workshop facilitation	Buried in skills	Surface concrete examples: "Facilitated executive and academic workshops on AI adoption at Aeres Hogeschool and Windesheim University - converted skepticism into 8-course restructure"	Mirrors "facilitate executive workshops" requirement verbatim
4	KONGSBERG	Listed chronologically	Pull a bullet: "Client-facing technical delivery: full BI deployments for BP and Statoil across BP Jordan, BP Oman, and Statoil - hardware through training, on-site"	Establishes prior client-facing technical delivery pattern

5	LinkedIn headline	Not specified	Update to: "AI Deployment Strategist	Innovation Lab Builder	Self-hosted AI Infrastructure	Executive Workshop Facilitator"	Mirrors Mistral's own role title and signals alignment
---	-------------------	---------------	--------------------------------------	------------------------	-------------------------------	---------------------------------	--

F) INTERVIEW PLAN

#	JD Requirement	STAR+R Story	S	T	A	R	Reflection
1	Facilitate executive workshops identifying AI opportunities	Aeres school-wide Scrum rollout	8 separate courses in siloed departments	Merge into one coherent sprint-based innovation track in under 2 months	Ran workshops with faculty, mapped dependencies, co-designed the sprint format	8 courses merged into one track; model still running	Should have documented the framework earlier - others had to rebuild from scratch
2	Design AI adoption roadmap	Value Chain Hackers AI lab	Windesheim needed AI-powered compliance tooling (CSRD/EUDR)	Build a demonstrator that practitioners could use without technical background	Designed the self-hosted AI stack + the beer game demonstrator as an experiential onboarding tool	Tool in active university use; framework copied to Viridis	The simulation layer (beer game) was what made the AI tool approachable - I would add that earlier next time
3	Lead pilot / proof-of-concept	Interactive technical due diligence	Pre-seed startup, investor needed independent technical assessment	Evaluate codebase and founding team capability	Read the contract, ran the technical review, gave a direct recommendation	Investor backed the deal; 4x exit	Trusted my judgment even when outcome was uncertain - the lesson is to commit to an honest read, not a comfortable one
4	Cross-team bridge between customer and internal teams	COTIT SaaS restructure	Early-stage logistics startup with no defined sales process	Define functional SaaS sales cycle and restructure internal roles	Mapped existing workflows, interviewed stakeholders, restructured roles using agile methods	Operational clarity achieved in 6 months	Solo restructuring is slower than co-design - should have pulled in an external facilitator for the change management piece

5	Track business-focused KPIs	Windesheim Supply Chain Finance lectoraat	No unified reporting framework across multiple lab projects	Build reporting structure for stakeholders	Designed KPI framework aligned to each project's funding contract; reported quarterly	All projects maintained funding and on-time delivery	KPIs are only useful if the people being measured helped design them - retrospectively, I would run participatory KPI design workshops first
6	Client-facing technical delivery	KONGSBERG BP Jordan	Full BI deployment for oil field operations in Jordan	Hardware through software through user training, on-site, tight timeline	Installed hardware, configured MOXA and server stack, deployed dashboards, trained local staff	System running within deadline; client signed off	First time I realized that "technical delivery" and "user adoption" are separate problems - the system worked but the users needed more time

Red-flag questions:

- "Do you have experience with Python AI development?" - Be honest: "My daily tools are infrastructure and orchestration layers (Flowise, n8n, Docker). I can build AI pipelines and deploy working systems. My Python is functional for data work and scripting but I am not a professional Python developer. I learn fast and the JD says 2+ years - I'd rather demonstrate what I can do than oversell a specific language."
- "What is your sales quota experience?" - "I have not carried a personal revenue quota. I have structured SaaS sales cycles (COTIT), run investor outreach that contributed to €2M in funding, and built the business case frameworks teams used to close. The consultative side of this role - I own. The pure hunter sales motion - I would need a co-pilot."

Recommended case study: Value Chain Hackers demonstrator (demonstrator.valuechainhackers.xyz) - shows AI deployment, client-facing use, and measurable impact in one URL.

G) POSTING LEGITIMACY

Assessment: Proceed with Caution

Signal	Finding	Weight
Posting freshness	No explicit date in API response; posting appears active with full JD text and hiring process defined	Neutral
Apply button / URL state	Active Lever posting with full content and hiring pipeline steps	Positive
JD specificity	Specific - names MEDDPICC, Python, travel percentage, 7-step hiring process	Positive
Salary transparency	No salary range disclosed for NL role (benefits package listed instead)	Neutral
Company hiring signals	Mistral AI actively expanding EU go-to-market in 2025-2026; Amsterdam office real	Positive
Reposting pattern	No prior appearance in scan-history.tsv	Neutral
Role market context	AI deployment consultant roles genuinely take 4-8 weeks to fill; 7-step process signals serious intent	Positive
Concern	On-site Amsterdam + 30-60% travel is a real commitment; the role may have a smaller applicant pool	Neutral

Context notes: Mistral is a well-funded, high-growth AI company with genuine EU expansion intent. The posting is specific enough to be credible. The main concern is the on-site requirement and travel expectation - verify during the screening call whether "on-site" means full-time or hybrid. No layoff signals found for Mistral.

H) CULTURE, PERSONALITY & LONG-TERM FIT

H1 - Org Culture Assessment

Stage and type: High-growth AI startup / scaleup. Mistral AI is a well-funded French AI company in active EU expansion. The Amsterdam office is part of a go-to-market buildout. The culture is likely fast-paced, technically elite, and results-driven - classic high-growth AI startup dynamics.

Culture signals: The JD language is ambitious: "strategic vision to production implementation," 30 to 60% travel, MEDDPICC selling methodology, a 7-step hiring process including a 60-minute LLM technical screen. This is a company that moves fast and expects technical depth. The on-site requirement and travel expectation signal that Mistral values in-person client engagement over flexibility.

Physical/work environment: On-site Amsterdam. For Christiaan, Amsterdam is commutable from Baarn (40 minutes by train), but on-site full-time is a significant daily investment. No co-working or lab environment - this is a commercial solutions office.

Match against 2-year vision: The 2-year vision is a hackerspace: small group, building new things, high trust, new territory. Mistral is frontier territory (frontier AI company, EU market, cutting-edge models) and the "building deployment roadmaps from scratch" mandate is partially a 0-to-1 activity. However, the role is primarily commercial - workshops, business cases, client management - not an internal lab or maker context. The team size at the Amsterdam office is small, which is a genuine alignment point.

H2 - Personality Fit Table

Dimension	What the role requires	Christiaan's profile	Match
Starter vs. finisher	Mix: scoping and deploying AI solutions is 0-to-1 work; account management and client retention is finisher territory	ENFP-T starter, strongest 0 to 1 and 1 to 2	Good for deployment phase; drain in account management phase
Variety vs. repetition	High variety: different clients, different domains, frequent travel	Thrives on variety, drains fast on repetition	Good match
Autonomy level	Individual contributor with significant client ownership	Needs ownership, not execution-only	Good
Build vs. maintain	Build and deploy AI systems with clients; then maintain client relationship	Builder identity - maintenance depletes energy	Good for build phase; account maintenance is a drain
Fractional fit	Full-time, on-site, 30 to 60% travel	Optimal: 2 to 3 concurrent 0.4 to 0.6 FTE	Poor - full-time on-site with travel is the most fractional-incompatible setup possible
Energy spike tolerance	High-growth startup culture - energy and initiative are welcomed	Front-loaded high energy in first weeks	Good match for a startup environment
Team size	Small Amsterdam team	Small team, high trust preference	Good match

Flag: Full-time on-site with 30 to 60% travel is a hard fractional conflict. The travel requirement specifically conflicts with the multi-engagement model.

H3 - Values and Mission Alignment

Mistral AI is building frontier open-weight AI models with a European independence framing. The mission - sovereign European AI - is one Christiaan would genuinely engage with. The work involves deploying AI at enterprise clients, which connects to the transformation methodology he cares about. This is closer to intrinsic motivation than most roles in this batch.

However: the Python technical depth required, the MEDDPICC sales methodology, and the 30 to 60% travel expectation make the practical execution a poor fit for how Christiaan actually works. The mission is right; the mechanism is misaligned. He would care about what Mistral is building but would struggle in the specific role as described.

H4 - Energy Analysis

Energizers for this role:

- Frontier AI company - working on the edge of what is possible in European AI
- Workshop facilitation with enterprise clients - core to what Christiaan does well
- Variety of clients, domains, and deployment contexts
- Small Amsterdam team - high visibility, direct access to decision-makers
- "Designing AI systems from scratch" mandate for each client engagement

Likely drains:

- Python technical screen - a known weak point that creates anxiety and potential failure at the hiring gate
- 30 to 60% travel - physically demanding, conflicts with multi-engagement model
- Account management and client retention after the deployment is live
- MEDDPICC sales motion - structured revenue methodology is not Christiaan's natural mode
- On-site full-time removes flexibility for other engagements

H5 - 18-Month Durability Test

Rating: Short-term fit with dual risks - both hiring and post-hire.

The hiring risk is real: the 60-minute LLM technical screen is likely to expose the Python gap. If Christiaan passes and joins, the first 12 months of deploying AI systems for different enterprise clients could be genuinely energizing - high variety, frontier domain, direct impact. The risk at 18 months is twofold: the travel pace will accumulate fatigue, and the role will shift from deployment to account maintenance. The multi-engagement model is impossible to maintain alongside this role.

H6 - Personality-Specific Red Flags

Red flag	Present?	Severity	Context
Role is primarily maintenance/ops	Partial - account management phase after deployment	Low to Medium	Deployment is the primary activity; maintenance is secondary
Solo sales of an unready product	Partial	Medium	Sales motion alongside AE, but commercial KPI pressure is real. Product is ready (Mistral models), but the "solo sales" dynamic of MEDDPICC without a co-pilot is a risk signal
Full-time exclusivity expected	Yes	High	On-site full-time plus 30 to 60% travel - hardest fractional conflict in this batch
Large corporate, slow decision cycles	No	n/a	Fast-moving startup
Governance/board role in declining org	No	n/a	Growing company
Ceremony-only Scrum Master	No	n/a	Not a Scrum role

H7 - Fit Verdict

The honest case for this match:

Mistral is exactly the kind of frontier company Christiaan would want to be adjacent to. The workshop facilitation mandate, the small Amsterdam team, and the variety of enterprise deployment contexts are all genuine energizers. If the Python gap is closable quickly (2 to 4 weeks of focused practice to pass a 60-minute LLM technical screen), the cultural fit for the first 12 months would be strong.

The honest case against:

The full-time on-site requirement with 30 to 60% travel is the hardest structural conflict in this batch with the multi-engagement model. The Python technical screen is a real hiring gate that current evidence suggests Christiaan will not pass without deliberate preparation. The MEDDPICC sales motion is not his natural mode. The role score of 2.8 reflects these gaps accurately. The culture fit is conditional specifically on: (1) Python preparation before applying, and (2) willingness to treat this as a single full-time engagement for 12 to 18 months, not a fractional component.

Overall personality/culture fit: Conditional (condition: Python technical preparation completed before applying; accepted as a single full-time engagement with travel, not a fractional component)

Note: If Christiaan is committed to the fractional multi-engagement model, this role is structurally incompatible regardless of mission alignment. Apply only if committing to this as a primary single engagement.

KEYWORDS EXTRACTED

AI deployment, enterprise AI, executive workshops, AI adoption, ROI, business case, proof-of-concept, pilot, solutions consultant, MEDDPICC, Python, LLM, AI transformation, client-facing, stakeholder management, production deployment, AI strategy, value realization, KPI, cross-functional

JOB DESCRIPTION (ARCHIVED)

Archived 2026-05-21 - original posting may be removed after offer closes

Title: AI Deployment Strategist

Location: Amsterdam, Netherlands

Team: Solutions

Employment Type: Full-time, Onsite

Country: Netherlands

Role Overview:

This position bridges business strategy and technical execution. The successful candidate will drive the adoption and deployment of Mistral's AI solutions by collaborating with enterprise clients from initial planning through production implementation.

Key Responsibilities:

Strategic Planning:

- Facilitate executive workshops identifying AI opportunities for business transformation
- Build AI adoption strategies with customers, showing feasible pathways to measurable value
- Partner with sales teams on ROI calculations and business case development

Solution Implementation:

- Design comprehensive AI systems integrating Mistral's technology into client operations
- Collaborate with Applied AI specialists on prototype development and production deployment
- Lead pilot initiatives and proof-of-concept projects

Client Success:

- Function as strategic advisor ensuring maximum value realization from Mistral investments
- Track business-focused performance metrics and report progress to sponsors
- Identify growth potential within existing client relationships

Cross-Team Collaboration:

- Bridge customer needs with internal Mistral teams
- Create reusable deployment frameworks and best practices
- Travel 30-60% annually for client engagement

Required Qualifications:

- Minimum 2+ years in client-facing technical and strategic roles

- Degree in relevant scientific discipline
- AI/ML/Data Science foundational knowledge
- Hands-on experience building and deploying AI applications using Python
- Strong executive communication abilities
- Business problem-solving expertise
- Sales frameworks knowledge (MEDDPICC) preferred

Benefits Package:

- 25 PTO days annually
- €60 monthly transportation allowance
- €170 monthly food allowance
- €60 sport/gym allowance

Hiring Process:

Candidates proceed through: screening call, manager interview (30 min), business acumen assessment (45 min), LLM technical evaluation (60 min), panel presentation with preparation, value discussion (30 min), and reference verification.
