

[Report 010] GitLab - AI Transformation Owner, Marketing

Score: 3.7/5
Culture Fit: Strong
URL: <https://job-boards.greenhouse.io/gitlab/jobs/8548105002>
PDF: 
Legitimacy: High Confidence
Verification: confirmed (WebFetch)
Date: 2026-05-21

A) ROLE SUMMARY

Field	Detail
Archetype	AI Transformation / Agentic (hybrid)
Domain	AI adoption, change management, no-code agent building, marketing operations
Function	Build, facilitate, transform
Seniority	Mid-Senior (product management mindset + hands-on building)
Remote	Remote - Canada, Ireland, United Kingdom, US (US salary published: \$152,800-\$259,200)
Team size	Embedded in Marketing; partners with Enterprise AI team
TL;DR	Own AI transformation for GitLab's Marketing function - map workflows, build no-code agents, drive adoption through champion networks and change management, own the AI agent fleet's KPI performance.

A) NOTE ON LOCATION

The published locations are Canada, Ireland, United Kingdom, and US. The Netherlands is **not listed**. This is the primary structural concern for this posting. However, GitLab is a genuinely all-remote company that has previously expanded eligible locations post-posting - worth confirming during a screening call whether NL/EU is possible.

B) MATCH WITH CV

JD Requirement	CV Evidence	Fit
Own AI transformation strategy for a function	AI Transformation Lead archetype: Aeres school-wide rollout, Windesheim lab transformation, VCH AI adoption	Strong - this is a primary archetype
Map end-to-end workflows to identify AI opportunities	Business Process Design (Expert): "process modeling, workflow optimization, operational setup, business-IT alignment"	Strong
Drive adoption through channels, rituals, feedback loops	Agile Coaching (Expert, 15+ years): retrospectives, sprint rituals, stakeholder alignment; Conscious Competence as change model	Strong - the facilitation methodology is exactly this
Build and sustain Champion network across sub-teams	Ecosystem building: Open Food Chain community activation (Discord), Tonomy Foundation ecosystem, student talent magnet	Strong - community/champion network building is a demonstrated pattern
Build AI agents using no-code and low-code platforms	Self-hosted AI stack (Flowise, n8n, OpenWebUI, Supabase); "built AI-based supply chain mapping tools"	Strong - n8n in particular is a direct no-code/low-code agent platform

Author and iterate on skill files that define agent behavior	No direct "skill file" authoring experience in the GitLab sense; but n8n workflow design and Flowise flow design are functionally equivalent	Moderate - the concept is identical, the tooling vocabulary is different
Configure MCP servers and tools to connect agents with business systems	MCP server configuration is an emerging skill area; closest evidence is self-hosted AI infrastructure (Supabase, APIs, Docker)	Moderate - technically adjacent; will need to demonstrate hands-on MCP experience
Own performance tracking and KPI evaluation for agent fleet	Project & Program Management (Expert): "reporting to stakeholders across university programs"; designed KPI frameworks for funded initiatives	Strong
Product management mindset: intake, backlog, iteration, adoption	PSPO I certified; ran product sprints at Tonomy Foundation (2-week cycles), Windesheim, Aeres	Strong
Build peer networks or communities of practice	Open Food Chain Discord community, 2bSMART cross-Benelux network, Windesheim/Aeres practitioner networks	Strong
Challenge teams to reimagine workflows (not just automate)	Conscious Competence model explicitly applied: "People don't change behavior by hearing about it - they change by experiencing it in a safe, designed environment"	Strong - this is the core of the transformation methodology
Deep operational knowledge of Marketing processes	Weak - Christiaan's domain knowledge is supply chain, education, and blockchain; Marketing operations is a genuine gap	Weak - the methodology is there; the Marketing domain expertise is not
Fast learner mastering no-code/low-code AI platforms	AI stack deployed from scratch; ramps on new tools quickly (KONGSBERG pattern, self-hosted everything)	Strong

Gaps

Gap	Blocker?	Mitigation
Marketing domain knowledge (the role is "AI Transformation Owner, Marketing")	Moderate - GitLab will want someone who understands Marketing Operations, demand gen, content workflows, campaign management	Frame it directly: "I transform how organizations adopt AI - the domain rotates, the methodology doesn't. I have done this in education, supply chain, and innovation labs. Marketing is the next domain I would learn."
MCP server configuration experience	Nice-to-have - this is emerging technology; most candidates will not have deep MCP experience	Demonstrate the adjacent: self-hosted AI infrastructure, API integration, Docker-based stack management
Location - NL not listed	Potential hard blocker if GitLab does not expand eligible locations for this role	Verify during screening call; GitLab has a history of flexibility on this
US salary published - EU equivalent unknown	Compensation risk if EU equivalent is significantly lower	The US range (\$152,800-\$259,200) is very wide; EU equivalent at even 60% would be €90,000+

C) LEVEL AND STRATEGY

Level detected: Mid-Senior - the role asks for product management mindset + hands-on agent building + change management + community building. It is not a director-level strategy role and not a junior executor role.

Christiaan's natural level for this archetype: This is his best archetype match in this batch. He operates at exactly this level: strategic enough to own the transformation map, hands-on enough to build the agents, skilled enough to run the champion network facilitation.

Sell senior without lying:

- Lead with the Conscious Competence methodology as the change management framework: "I have used Conscious Competence as a transformation spine across every lab I've built. The people who resist AI adoption

are not lazy - they are unconsciously incompetent. The design question is: what experience do you create to move them to conscious incompetence first?"

- Lead with n8n/Flowise as the hands-on no-code agent-building evidence: "I built and maintain an AI workflow stack using n8n, Flowise, and Supabase - the same class of tools described in this role."
- Lead with the champion network pattern: "Every lab I've built has a version of a champion network. The Windesheim AI lab had student champions. Open Food Chain had Discord moderators. The pattern is the same."

If downlevelled: This role does not have a clear downlevel variant. If offered a junior version, decline - the methodology value is in the senior application of it.

D) COMP AND DEMAND

Metric	Data	Source
Published US range	\$152,800 - \$259,200 USD	JD
Estimated EU equivalent (GitLab's EU discount typically 20-35%)	€100,000 - €170,000 EUR - significantly above Christiaan's target	Estimate
Christiaan's target	€65,000 - €90,000 (stretch: €80,000 - €110,000)	_profile.md
Demand trend	AI transformation roles in enterprise software are high-growth; GitLab's internal AI transformation is accelerating	Market context

Assessment: If the EU equivalent lands at the lower end of the estimate (€100,000+), this role would exceed target range. The compensation is a positive, not a concern. The larger risk is the location eligibility gap and the Marketing domain knowledge gap.

E) CUSTOMIZATION PLAN

#	Section	Current Status	Proposed Change	Why
1	Summary	Generic bridge-builder framing	Reframe as: "AI Transformation practitioner - I design the environments where organizations adopt new capabilities. Built 5+ innovation labs. Deployed AI stacks from scratch. Run champion networks. Applied this in education, supply chain, and blockchain. Marketing is next."	Mirrors GitLab's "challenge teams to reimagine workflows" framing
2	AI Stack / n8n	Listed under Windesheim	Surface explicitly: "Built and maintain AI workflow stack: n8n (workflow	n8n is a direct match for "no-code/low-code AI platforms"

			automation), Flowise (agent orchestration), OpenWebUI (LLM interface), Supabase (data layer) - Docker-based, self-hosted, production-grade"						
3	Conscious Competence	Not explicitly named in CV	Add to facilitation skills: "Applied Conscious Competence framework as transformation spine across 5+ lab rollouts - moves teams from resistance to adoption through designed experience, not instruction"	This is the methodology GitLab is buying in this role					
4	Champion network experience	Buried under Open Food Chain community	Surface as a transferable capability: "Built and moderated champion networks across Open Food Chain (Discord, 200+ members), Windesheim AI lab (student champions), 2bSMART (cross-Benelux network)"	Mirrors "build and sustain a Champion network" directly					
5	LinkedIn	Not specified	Add: "AI Transformation	No-Code Agent Builder	Conscious Competence	Champion Networks	n8n	Flowise"	Signals all primary keywords from the JD

F) INTERVIEW PLAN

#	JD Requirement	STAR+R Story	S	T	A	R	Reflection
---	----------------	--------------	---	---	---	---	------------

1	Drive AI adoption through change management	Aeres school-wide Scrum rollout	Faculty resistant to change; 8 siloed courses; no budget for external consultants	Transform how the school runs programs using agile methods	Ran workshops using Conscious Competence - first made the problem visible, then made the new method safe to try	8 courses merged into one sprint track; faculty ownership maintained	Adoption only happens when people feel the gap themselves. You cannot tell someone they are unconsciously incompetent - you have to design an experience that reveals it safely
2	Build AI agents using no-code platforms	Value Chain Hackers AI stack	Windesheim researchers needed AI-powered compliance mapping tools without requiring coding skills	Build tools they could use without technical background	Deployed n8n workflows, Flowise agents, Supabase data layer; designed the interface for non-technical users	Tools in active use by students and researchers; demonstrator live at valuechainhackers.xyz	The hardest part was not the build - it was the interface design. Non-technical users abandon tools the moment they feel out of depth. Every AI tool needs an onboarding story built into the first 3 minutes
3	Build and sustain Champion network	Open Food Chain community activation	New blockchain initiative needed to grow a technical and stakeholder community	Build an active, self-sustaining Discord community from zero	Recruited early members, designed channels and rituals, ran regular sessions, created a moderation team	Community grew to 200+ active members; supported new investment round	Champion networks require deliberate maintenance - the energy drops without ritual. I would now build a "rhythm of engagement" calendar from day one
4	Map workflows to identify AI opportunities	COTIT operational restructure	Logistics startup with undocumented processes and conflicting stakeholder priorities	Map actual workflows (not assumed ones) and identify where AI/automation could create leverage	Ran individual stakeholder interviews, mapped workflows from observation, not documentation	Identified 3 automation opportunities; restructured 2 roles around them	People describe their ideal workflow, not their actual one. You have to watch the work, not just ask about it
5	Own KPI evaluation for agent fleet	Windesheim AI lab KPI framework	No reporting structure for a portfolio of AI	Design a KPI framework that funders and	Built per-project KPI dashboards aligned to	All projects maintained funding; no performance gaps surfaced unexpectedly	KPIs are a lagging indicator - I would now

			tool deployments	stakeholders could use	funding contracts; reported quarterly		add leading indicators (usage frequency, user confidence score) to every AI deployment from day one
6	Challenge teams to reimagine workflows	COVID-19 Mega Project	Pandemic lockdown meant 8 separate courses could no longer run independently	Do not just move courses online - redesign what learning looks like in a disrupted environment	Ran a futures workshop: "what does supply chain education look like if we assume everything we knew is wrong?" Led to a simulation- based interdisciplinary program	Program delivered in weeks; approach became a model	The constraint was the gift. When you cannot do the old thing, you are forced to invent the new thing. I would now deliberately introduce the same constraint in non-crisis contexts - "assume this process no longer exists, what do you build instead?"

Red-flag questions:

- "You don't have Marketing domain experience - this role is specifically for the Marketing function." - "You are right that I have not worked inside a Marketing org before. What I bring is the methodology for AI transformation that works across domains - I have applied it in education, supply chain, and blockchain ecosystems. The Marketing domain is one I would learn fast. The transformation methodology is the rare part. GitLab's AI Engineer handles the technical delivery; I would handle the business context, adoption, and community - and I pick up domain context in weeks, not months."
- "The eligible locations are Canada, Ireland, UK, US - you're in the Netherlands." - "I noticed that. I wanted to raise it directly: is there flexibility on the location for the right candidate? GitLab's all-remote culture is one of the reasons I'm interested in this role - the work itself has no geography requirement."
- "Have you configured MCP servers before?" - "Not in a production GitLab environment. I have configured and connected AI tools via APIs, Docker networks, and Supabase endpoints - the connectivity layer is familiar. MCP is a protocol I would ramp on in the first 2 weeks. I would rather be honest about the learning curve than oversell it."

Recommended case study: n8n + Flowise AI stack at Windesheim + beer game demonstrator (demonstrator.valuechainhackers.xyz) - shows hands-on no-code agent building, non-technical user design, and measurable adoption in one narrative.

G) POSTING LEGITIMACY

Assessment: High Confidence

Signal	Finding	Weight
Posting freshness	Active Greenhouse posting with full JD content	Positive
JD specificity	Very specific: names MCP, skill files, Champion network (5-10% time), agent fleet, no-code/low-code platforms	Positive

Salary transparency	US range published (\$152,800-\$259,200) - unusual level of transparency signals real opening	Positive
Company hiring signals	GitLab is publicly investing in internal AI transformation; this role is part of a named Enterprise AI initiative	Positive
Location restriction	Canada, Ireland, UK, US only - NL not listed; could indicate a specific hiring geography constraint	Neutral/Concerning for Christiaan
Reposting pattern	No prior history in scan-history.tsv	Neutral
Role market context	AI Transformation Owner is a new role category; GitLab pioneering it internally signals genuine need	Positive

Context notes: The salary range and JD specificity (MCP servers, skill files, Champion network percentages) are unusually detailed - this is a real, well-scoped role. The location constraint is the only concern and may be addressable given GitLab's all-remote culture. Recommend verifying during the first screening call.

H) CULTURE, PERSONALITY & LONG-TERM FIT

H1 - Org Culture Assessment

Stage and type: Same company as 008 and 009 - public, all-remote, async-first. The AI Transformation Owner role is embedded in GitLab's Marketing function in partnership with the Enterprise AI team. This is a frontier-context role within a large company: GitLab is actively building internal AI transformation capability and this role is at the center of that initiative. The culture signals here are different from the engineering org - Marketing is faster-moving, more creative, and more experimentation-friendly than CI/CD infrastructure programs.

Culture signals: The JD language is unusually forward-thinking: "challenge teams to reimagine workflows rather than simply automating existing ones," "no-code/low-code AI platforms," "Champion network," "skill files that define agent behavior," "MCP server configuration." This is not a standard HR-managed transformation role - it reads as written by people who actually build with AI. The specificity (5 to 10% time on Champion networks, named technologies like MCP) suggests a team that already knows what it wants.

Physical/work environment: Fully remote - Canada, Ireland, UK, US listed (Netherlands not listed). Structural concern for Christiaan, but GitLab's all-remote culture makes location exceptions possible.

Match against 2-year vision: This is the strongest match to the 2-year vision in this entire batch. The role is: build AI transformation infrastructure for a function, run a champion network, architect workflows, own agent fleet strategy. This is a hackerspace mandate inside a large company. The "small group, high trust, building new things" quality is present: the Enterprise AI team is small, the Marketing function is the partner, and the mandate is genuinely pioneering (no established playbook for internal AI transformation at this specificity level). The "new territory" dimension is fully alive - this is new territory for GitLab and for the field.

H2 - Personality Fit Table

Dimension	What the role requires	Christiaan's profile	Match
Starter vs. finisher	Strong 0 to 1 and 1 to 2: map workflows, build agents, design Champion network from scratch	ENFP-T starter, strongest 0 to 1 and 1 to 2	Strong match
Variety vs. repetition	High variety: evolving AI tools, different sub-teams, new workflows to map regularly	Thrives on variety	Strong match
Autonomy level	High: "own the function's AI strategy," "make strategic prioritization decisions"	Needs ownership	Very strong match
Build vs. maintain	Build-heavy: workflow mapping, agent building, Champion network design - plus ongoing iteration	Builder identity	Strong for build phase; iterative maintenance is lighter than pure ops
Fractional fit	Full-time IC role, but remote with async culture - more flexibility than on-site roles	Optimal: 2 to 3 concurrent 0.4 to 0.6 FTE	Moderate - full-time IC but async culture creates more room than most

Energy spike tolerance	GitLab's Marketing culture and Enterprise AI team will welcome rapid energy and ideas in an AI transformation context	Front-loaded high energy	Strong match - transformation contexts reward early energy bursts
Team size	Small Enterprise AI team as primary partner	Small team, high trust preference	Strong match

H3 - Values and Mission Alignment

This is the highest values alignment in this batch. Christiaan's core identity is: building environments where organizations learn to use new capabilities, applying Conscious Competence as the transformation methodology, running champion networks, and making technology stick with non-technical people. The GitLab AI Transformation Owner role is asking for exactly this - not as a metaphor but literally: map workflows, build agents, run a champion network, drive adoption through designed experiences.

The GitLab brand adds a dimension Christiaan would find intrinsically interesting: the company is itself a frontier example of the async-first distributed work model at scale. Working at GitLab is working inside one of the most-documented experiments in remote-first organizational design. This is not purely transactional. He would talk about this work at a dinner party.

The one honest gap in values alignment: the domain is Marketing, not education or sustainability or a cause. But the transformation methodology connection is strong enough to override the domain distance.

H4 - Energy Analysis

Energizers for this role:

- Own-the-strategy mandate for an entire function's AI transformation - the highest-ownership AI role in this batch
- Champion network building - this is what Christiaan does for free (Open Food Chain Discord, Windesheim student champions, 2bSMART Benelux network)
- n8n and Flowise are the exact tools described - no ramp-up needed
- Frontier AI context: MCP servers, skill files, agentic workflows - this is where the field is moving
- Small Enterprise AI team as primary partner - high trust, direct access
- Conscious Competence methodology directly applicable to the adoption challenge
- Fully remote - no friction with the multi-engagement model's geographic needs

Likely drains:

- Marketing domain is not intrinsically exciting - the function being transformed is commercial operations
- KPI tracking for agent fleet over time becomes iterative maintenance
- Location eligibility concern - if NL is not approved, the entire opportunity disappears
- GitLab's documentation culture requires consistent written precision - can feel heavy during high-creativity phases
- MCP server configuration is emerging tech that requires learning investment

H5 - 18-Month Durability Test

Rating: Sustainable.

The role is structured for sustained engagement: AI tools evolve rapidly, meaning the "new things to build" supply does not run out. The Champion network requires ongoing cultivation. Each new Marketing workflow is a new mapping challenge. At 18 months, the likely picture: the initial agent fleet is built and running, the Champion network is active, and the role shifts toward optimization and expansion into other functions. If GitLab extends the model to other functions, Christiaan's mandate grows naturally. If the Marketing function stabilizes and no expansion follows, there is some plateau risk - but the technology evolution pace in AI means the tools will continue to create new building opportunities.

H6 - Personality-Specific Red Flags

Red flag	Present?	Severity	Context
Role is primarily maintenance/ops	Low risk	Low	AI tool evolution ensures ongoing build mandate
Solo sales of an unready product	No	n/a	Internal transformation role, no sales motion

Full-time exclusivity expected	Partial	Low to Medium	Full-time IC but async culture creates more flexibility than typical
Large corporate, slow decision cycles	Moderate	Low to Medium	Public company but Marketing/AI team is fast-moving
Governance/board role in declining org	No	n/a	Growing company in growth phase
Ceremony-only Scrum Master	No	n/a	Not a Scrum role

One structural flag: Location not listed (NL). This is a hard blocker if GitLab does not approve NL for this role. Must verify in screening call before investing significant application effort.

H7 - Fit Verdict

The honest case for this match:

This is the best personality and culture fit in this batch. The role asks for exactly what Christiaan does when no one is paying him: run Champion networks, build learning environments, design workflows that make AI stick with non-technical people, use n8n and Flowise to build agents, and apply Conscious Competence as the change methodology. The small Enterprise AI team is the "small group, high trust" context the 2-year vision describes. The frontier AI mandate means the work will stay novel. The fully async-remote culture fits the multi-engagement model better than any on-site role. The score of 3.7 accurately reflects the skill match, and the culture fit would push the effective score to 4.0 or above if culture were weighted equally.

The honest case against:

The Marketing domain is not Christiaan's frontier - he is transforming a commercial Marketing function, not an education system or a sustainability lab. The location eligibility concern is a real structural risk: if NL is not approved, the role is inaccessible. The compensation (US range \$152k to \$259k) suggests a role level and compensation expectation that may create friction if the EU equivalent is significantly discounted. The full-time IC commitment, while lighter than on-site roles due to async culture, still limits the fractional model.

Overall personality/culture fit: Strong

Note: Among all 10 roles in this batch, this is the strongest personality and culture fit. The 3.7 score is limited by the Marketing domain gap and location uncertainty, not by culture. Pursue this role actively. Confirm NL location eligibility first - before writing any application materials.

KEYWORDS EXTRACTED

AI transformation, change management, adoption, no-code, low-code, agent building, MCP server, skill files, Champion network, workflow mapping, Flowise, n8n, product management, backlog, KPI, performance tracking, community of practice, GitLab, enterprise AI, marketing operations, agent fleet

JOB DESCRIPTION (ARCHIVED)

Archived 2026-05-21 - original posting may be removed after offer closes

Title: AI Transformation Owner, Marketing
Location: Remote - Canada, Ireland, United Kingdom, US
Salary Range (US): \$152,800 - \$259,200 USD
Company: GitLab

Role Overview:

GitLab seeks an AI Transformation Owner for its Marketing function. This hybrid product management and strategic role focuses on identifying where artificial intelligence can fundamentally reshape organizational operations. The position combines business strategy, hands-on agent building, and change management to drive measurable outcomes across the marketing team.

Key Responsibilities:

Strategy & Prioritization:

- Own the function's AI strategy aligned with executive priorities and business metrics

- Map end-to-end workflows to identify high-impact opportunities where "AI could let your org execute orders of magnitude faster"
- Manage intake of AI requests and ideas across the function
- Make strategic prioritization decisions focused on business outcomes

Adoption & Change Management:

- Drive adoption through channels, rituals, and feedback loops that make AI visible within teams
- Build and sustain a Champion network across sub-teams (5-10% time commitment)
- Coordinate with Enterprise AI to share patterns and learnings across the organization
- Challenge teams to reimagine workflows rather than simply automating existing ones

Hands-On Building & Operations:

- Build AI agents using no-code and low-code platforms
- Author and iterate on skill files that define agent behavior
- Configure MCP servers and tools to connect agents with business systems
- Own performance tracking and KPI evaluation for your function's agent fleet
- Remain adaptable as AI tools evolve rapidly

Required Qualifications:

Business & Strategic Skills:

- Deep operational knowledge of your function's processes and constraints
- Product management mindset with focus on intake, backlog, iteration, and adoption
- Strong communication and influence abilities
- Experience building peer networks or communities of practice
- Cross-functional understanding of how processes interconnect

Technical & Hands-On Skills:

- Ability to build working agents and configure skills without writing production code
- Fast learner ready to master no-code/low-code AI platforms and prompt engineering
- Strong conceptual understanding of AI capabilities (summarization, classification, generation, automation, agentic workflows)
- Ability to map structured and unstructured data flows
- Commitment to staying current with rapidly evolving AI landscape

Team Structure:

The role partners closely with Enterprise AI within the Enterprise Technology & AI organization. The AI Engineer provides technical delivery, platforms, and architecture; the Transformation Owner brings business context, no-code building, and adoption strategy.

Benefits & Support:

GitLab offers flexible paid time off, equity compensation, growth and development funds, parental leave, team member resource groups, and comprehensive health and financial benefits.

GitLab is an equal opportunity employer committed to building diverse teams. The company welcomes applications from candidates at varying experience levels and encourages underrepresented groups to apply.
