GitLab

Engagement Manager, EMEA

21 May 2026

Dear GitLab team,

At KONGSBERG, I delivered enterprise BI implementations for BP and Statoil across Jordan, Oman, and Azerbaijan. No fixed playbook. Each engagement started with understanding what the client actually needed, ended with a working system and trained staff, and was designed entirely from scratch. Hardware installation, server configuration, data architecture, dashboard build, user training, sign-off. That is a professional services engagement, even without the title.

The scope has always been multi-stakeholder and complex. At Aeres, I designed and aligned an eight-course program restructure in under two months - eight course leads, no shared budget, competing priorities, a two-month deadline. At Windesheim, I currently run practitioner interviews to map AI tool adoption patterns: structured discovery, synthesis, and recommendations to leadership. These are the same skills that drive quality engagements: understand what the customer needs, design the right program, get alignment, deliver.

GitLab's DevOps domain is native to me. Docker, Kubernetes, CI/CD pipelines, GitHub - I run and maintain this infrastructure daily. The commercial PS motion (SOW authoring, staffing plans, pricing structures) is the honest step up. My closest equivalent is grant writing with formal deliverable mapping and partner sign-off, which secured €2M across innovation programs. I would want a mentored first six months on the commercial mechanics.

Fully remote from Netherlands is exactly the working model I operate in.

Kind regards,

Christiaan Verhoef
