Anthropic

Applied AI Architect, Industries
21 May 2026

Dear Anthropic team,

At Windesheim, I built the AI research lab from nothing: Flowise, OpenWebUI, n8n, Supabase on my own Linux infrastructure, self-funded, because the university had no budget and the researchers needed to experiment. The same students who could not describe what an LLM was were running live supply chain compliance tools six months later. That is the pattern I bring: build the environment where adoption becomes possible, then design the learning layer that makes it stick.

That learning layer is grounded in delivery. At KONGSBERG, I did full-cycle enterprise implementations in the field: oil rigs in Jordan, Oman, and Azerbaijan, for BP and Statoil. Hardware installation, server configuration, dashboard build, on-site staff training, no escalation path. That is the same motion as a Solutions Architect: understand what the client needs, build it, make sure they can use it without you. Currently at Windesheim, I interview practitioners weekly to map which AI tools work in production versus which ones only work in demos. I live in that gap.

Anthropic's approach to safety and interpretability is not a marketing position to me. When I evaluate tools for students and researchers who need to trust what they are using, predictability matters more than raw capability. That is the tension I understand, and that is the conversation I want to be part of.

One honest note: my German is conversational, not native. The JD is clear on this requirement. If there is flexibility in the onboarding period or client portfolio composition, I am worth the conversation.

Kind regards,

Christiaan Verhoef
