Canonical

Product Manager - AI

21 May 2026

Dear Canonical team,

I have done product management three times without the title. At Windesheim, I built a working AI research platform from zero: discovery (what researchers actually need), build (Flowise, n8n, OpenWebUI, Supabase on self-funded Linux infrastructure), deployment, and user adoption across students and faculty. At Tonomy Foundation, I co-defined the product vision for Pangea Vault, a self-sovereign identity product, and drove it from concept to first working version. At Spark! Living Lab, I owned the roadmap, stakeholder alignment, and delivery for a five-year cross-European program. Each of these was product management. None of them had the title.

Canonical's approach - open source as the core, remote-first as the working model, build-what-matters as the ethos - fits how I have operated throughout. I run Ubuntu-based infrastructure. I understand what researchers and practitioners need from AI tools because I am one of them. And I know what it takes to get something adopted by people who did not ask for it: you design the experience, not just the product.

The AI product scope is exactly where I want to put this next. CSRD, EUDR, supply chain traceability, AI-assisted compliance - these are the domains I have been building in. Canonical's open infrastructure approach to AI is the right layer for the work.

Kind regards,

Christiaan Verhoef
