Canonical

Software Alliance Ecosystem Manager
21 May 2026

Dear Canonical team,

I combine what most ecosystem managers do not have: 10+ years of DevOps on Ubuntu-based Linux infrastructure and a track record of building the software ecosystems themselves. At Tonomy Foundation, I co-built an open-source identity protocol from zero: stakeholder mapping, W3C DID working group engagement, partner onboarding, and a whitepaper that anchored the ecosystem externally. That project earned W3C recognition. The method is the same as any ISV alliance motion: align on the technical vision, create the content that makes adoption possible, build the community that sustains it.

The enablement track record goes further. At WDS Global in 2009, I designed a tutorial video series for HTC customers that management adopted globally as their standard customer education format. At InHolland, I designed a blockchain course from scratch that is still running four years later, independently of me. Content that outlasts the person who built it is not an accident. It is a design discipline: build for reuse, design the handover from the start.

Canonical's approach - open source as the foundation, ISV adoption as the growth motion - is a model I understand from the inside. I run Ubuntu-based infrastructure. I have built open-source protocols with partner ecosystems. I know what enables an ISV to commit to a platform: reference architectures, honest documentation, and a person who understands both the technical constraints and the commercial case.

Available for up to 25% travel. Based in Baarn, Netherlands. EU citizen, no sponsorship needed.

Kind regards,

Christiaan Verhoef
