n8n

AI Product Builder

21 May 2026

Dear n8n team,

I run n8n in production. At Windesheim, the AI research stack I built - n8n, Flowise, OpenWebUI, Supabase on Docker - handles real student and researcher workflows: intake routing, research onboarding, compliance checking for EUDR and CSRD supply chain data. Not a demo environment. Not a personal project. A working system other people depend on. Per the application instructions, I have included a screenshot of the first workflow I built with n8n.

Beyond being a user: I have built five innovation labs and incubated ten ventures from concept to working product. Every lab is a product. Spark! Living Lab has been running since 2020. The Value Chain Hackers AI compliance demonstrator is live at demonstrator.valuechainhackers.xyz and used in university teaching. These were built the same way: identify users with a real problem, build something they can use without a technical background, iterate based on what breaks in practice. The gap I keep running into with n8n workflows is the distance between "works in the demo" and "works when a non-technical practitioner runs it at 8 AM under a deadline." I live in that gap. I want to help close it.

n8n is the infrastructure I chose for my own lab because it is the most honest tool: open, composable, auditable. That is why I want to work on it.

Kind regards,

Christiaan Verhoef
