GitLab

Program Manager - London

21 May 2026

Dear GitLab team,

My methodology stack is unusual for a program manager: Prince2, ITIL, Scrum Master, PSPO I, and 15+ years applying it across universities, innovation labs, and funded research programs. Not conference certifications collected for a CV. Programs that were designed, run, and delivered - a school-wide Scrum implementation in under two months, an eight-course pandemic restructure with no precedent, a cross-European AI compliance initiative with five partner organizations. The methodology depth is what makes complex, multi-stakeholder delivery reliable rather than lucky.

The closest equivalent I have to professional services delivery is KONGSBERG: client-facing, multi-site, enterprise clients (BP, Statoil), scoped engagements with clear deliverables and a sign-off at the end. What I have not done is inside a SaaS company PS org. GitLab's DevOps domain is native ground - I run Docker, Kubernetes, CI/CD pipelines, and GitHub daily. I would certify in GitLab within week four. The context is the learning curve; the program management and stakeholder management are not.

One thing I want to raise directly: the role is listed as "Remote, United Kingdom." I am based in Baarn, Netherlands. Is this role constrained to a UK entity, or is GitLab's all-remote culture applicable here? I would want to clarify that before investing further time on both sides.

Kind regards,

Christiaan Verhoef
